

Model 321

Scabbler

The difference between APT scabblers is the handle configuration. The M321 features an extended handle, making it ideal for larger areas and keeping users more comfortable, and further away from the concrete surface.

For concrete prep, the APT M321 scabbler delivers precision and control. Its triple piston design makes it ideal for rust removal on steel, and removing concrete coatings, laitance, or light buildup without damaging the base surface. It provides fast, powerful blows to get the job done quickly and easily.

It's also effective for surface roughening when you need to prep concrete for bonding or overlays.

The 321 scabbler is perfect for surface roughening, scaling, and removal. Compact, lightweight, and easy to handle, it's the go-to choice for tight spaces and detailed surface work.

Features

- Triple piston design
- Easy to replace, interchangeable pistons
- Modifiable steel handle configuration

Specifications

Part #	1280303226
Number of Pistons	3
CFM @ 90 psi	14.8
Blows per minute	3,000
Hose size	.39"
Weight	10 lbs
Length	21"
Air inlet size	¾" Female NPT
Compatible piston type	Carbide or Cobalt Low Spark
